

ABSTRACT OF THE DISCLOSURE

An in-transit control method of minimum delivery sku is disclosed to control the in-transit quantity of goods effectively. A minimum delivery sku is designed to manage the quantity in transit such that the quantity of the packaged goods is recorded in detail when
5 disengaging and packaging in transit. The method involves transforming the packing number, pallet number and carton number into a unique minimum delivery sku; outputting the minimum delivery sku; and employing the minimum delivery sku to control the in-transit quantity of the goods.
